

AMENDMENTS TO THE SPECIFICATION:

Replace paragraph [0032] with the following amended paragraph:

[0032] Each clevis 32 associated with a plate 31 bears a guide device for the adjacent plate. To this end, each clevis 32 is mounted close to one of the lateral edges of each plate 31 which is are parallel to the axis of the drum 1, such that each clevis 32 is arranged close to the adjacent plate 31. As shown in Figures 3 and 4, each clevis 32 bears a guide roller 43 which is arranged circumferentially on the outside of the plate 31 associated with that clevis.
